

Most of the world's best cars
were built in small factories.

NEW!

RP8LD with roller block slide with bushing loading machine

Most of the machines, too. And – mostly – in Italy.

The history of automobiles teaches us that the majority of the models that became famous, as autos or brands, were created in artisan workshops, where the passion to plan and build sports and race cars made it possible to find the best solutions and performance together with a long-lasting and pleasing style. TLM was founded in the same golden years of the classic automobiles with a very

similar production philosophy: to build machines for the production of screws and bolts using the best and most resistant materials together with the most dependable mechanical technology. The introduction of electronics has been progressive and has not compromised the most critical parts of each machine. Dependability, duration and scheduled technical service: this is TLM, Italy.

RP8LD with roller block slide with bushing loading machine – Tool size: to roll the parts up to diameter 16 mm

Threading tools dimensions
Flat dies:
Movable die – mm
length: 170
thickness: 30
height: 80

Threading tools dimensions
Flat dies:
Fixed die – mm
length: 150
thickness: 30
height: 80
